# **Pythagoras Meets Pam Ayres**

If the hypotenuse is needed
My advice, have you heeded?
There's no need to fuss
The squares you plus.

$$h^2 = a^2 + b^2$$

But a short side to find?
Then I'm goin' to be kind
It remains a fact
You'll have to subtract!

$$a^2 = h^2 - b^2$$
